# AVG® AntiSpam

Nothing is more frustrating than inboxes full of scams and spam, but now there's a simple and effective fix. AVG AntiSpam is a cloud-based email security service that delivers comprehensive protection against spam, viruses, phishing attacks, and other email-borne threats. Always automatically up-to-date, it tackles dangers in the cloud before they ever have a chance to impact your network.

## How does this benefit you?

**Protect your network more efficiently**
Ten levels of in-depth, cloud-based protection help keep unwanted or malicious email from ever reaching your network. Volume-based email protection helps reduce clutter from inbound emails sent to nonexistent individuals at your domain. Outbound email scanning prevents your employees from spreading viruses or inadvertently spamming contacts and getting your IP address blacklisted.

**Block spammers**
Choose to block messages from specific individuals or entire countries in order to receive only the emails that are truly important. Create "on-the-fly" addresses to be used on any website or discussion forum so legitimate users of the address can be "locked down" if the address is ever harvested and abused by spammers.

**Save time and costs**
Fewer frustrations, fewer infections, and avoiding issues like IP blacklisting all mean fewer costly complications for your business. And because AVG AntiSpam is easy to navigate, change settings, and add devices, you'll save time, too. Plus, like all AVG CloudCare services, AVG AntiSpam will be billed on a single invoice to simplify your payments.
