AVG® Email Archive

Is a simple, secure, cloud-based solution that integrates seamlessly with your existing email infrastructure. It automatically routes all incoming, outgoing, and internal email through the AVG Email Archive cloud gateway. System is accessible 24-7, guarantees email continuity and can be easily searched by employees.

How does this benefit you?

Easy access
Domain Networks can remotely connect to your company's PCs and network from a web browser anywhere in the world using our intuitive, web-based portal.

Email continuity
Your employees can access any email in the active archive from wherever they may be, at any time, simply by using a web browser. In the event of internal network or server outages, email communication continues uninterrupted via AVG Archive's secure servers.

Secure, long-term storage
Because email is used constantly both as a communication tool and information repository, email storage needs to be more dynamic than regular files and folders. AVG Email Archive's active archiving automatically backs up permanent copies of all incoming, outgoing, and internal emails to a secure, encrypted repository so every message can be safely stored and retrieved by any of your employees at any time no matter what happens at your local network level.

Easy search
A unique set of eDiscovery tools allows users to live search any email or attachment within the archive on multiple levels. The AVG Email Archive DeepLink™ discovery engine makes it a quick and simple task for individuals to find, access, and recover the emails or information they need from the archive directly to their desktop.

Short-term storage with AVG Email Archive Lite
If you're looking for a shorter-term and lower-cost solution, you might consider AVG Email Archive Lite. This service offers secure archiving of all emails on a rolling 60-day basis so your employee can search, access, and recover emails without needing to contact your IT specialist or Domain Networks. After 60 days, the emails and information are automatically deleted.
