AVG® Remote IT

Our remote management tool helps you or your IT provider to be more proactive and productive when managing your network and devices. Stay informed and in control with in-depth event logs. Easily install or remove software, offer support, and solve problems with no interruptions to your employees - all remotely from any web browser!

How does this benefit you?

Easy access
Your IT provider can remotely connect to your company's PCs and network from a web browser anywhere in the world using our intuitive, web-based portal.

Quick fix
Get your issues resolved quickly and remotely to reduce the costs of onsite IT visits and see comprehensive, at-a-glance event logs based on individual PC activity for closer and easier monitoring.

Resolve all issues at once
Multiple issues can be resolved simultaneously in order to provide fewer distractions to your employees.

Shortcut buttons
Easily wake, restart, or shutdown PCs remotely using our simple shortcut buttons.

One-to-one chats
Your IT provider can quickly connect to any of your employees to assist those who need help without disturbing anyone around them.

Easy file transfers
Transfer any type of file to and from PCs.

Customizable resolution
Change the user's screen resolution and color contrast for a better viewing experience.

Stay aware of your PC needs
You or your IT provider can receive real-time alerts when any of your devices are low on RAM or storage space, etc.
